

The hystory

Hi my name is
Steven and I am a plankton.
At school we talked about climate and pollution.
As I got involved in this topic, I travelled around
the world in order to discover much
more about these topics.

of Steven

1. FUEL

COMBUSTION MOVES

2. PISTONS

3.

BELT

4.

WHEELS

I learned that the climate is just like a car. I made a diagram in order to explain it.

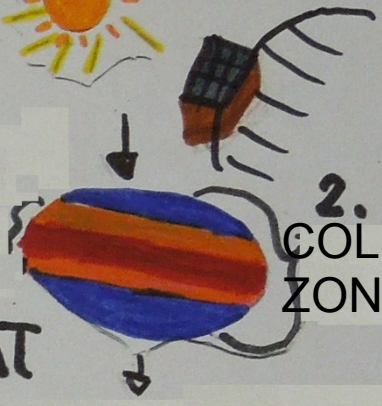

1. SUN

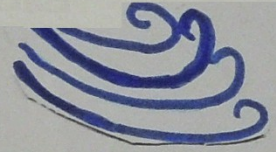

HOT ZONE

2. COLD ZONE

ΔT

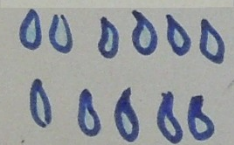

THANKS TO WIND

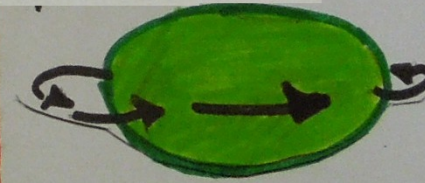

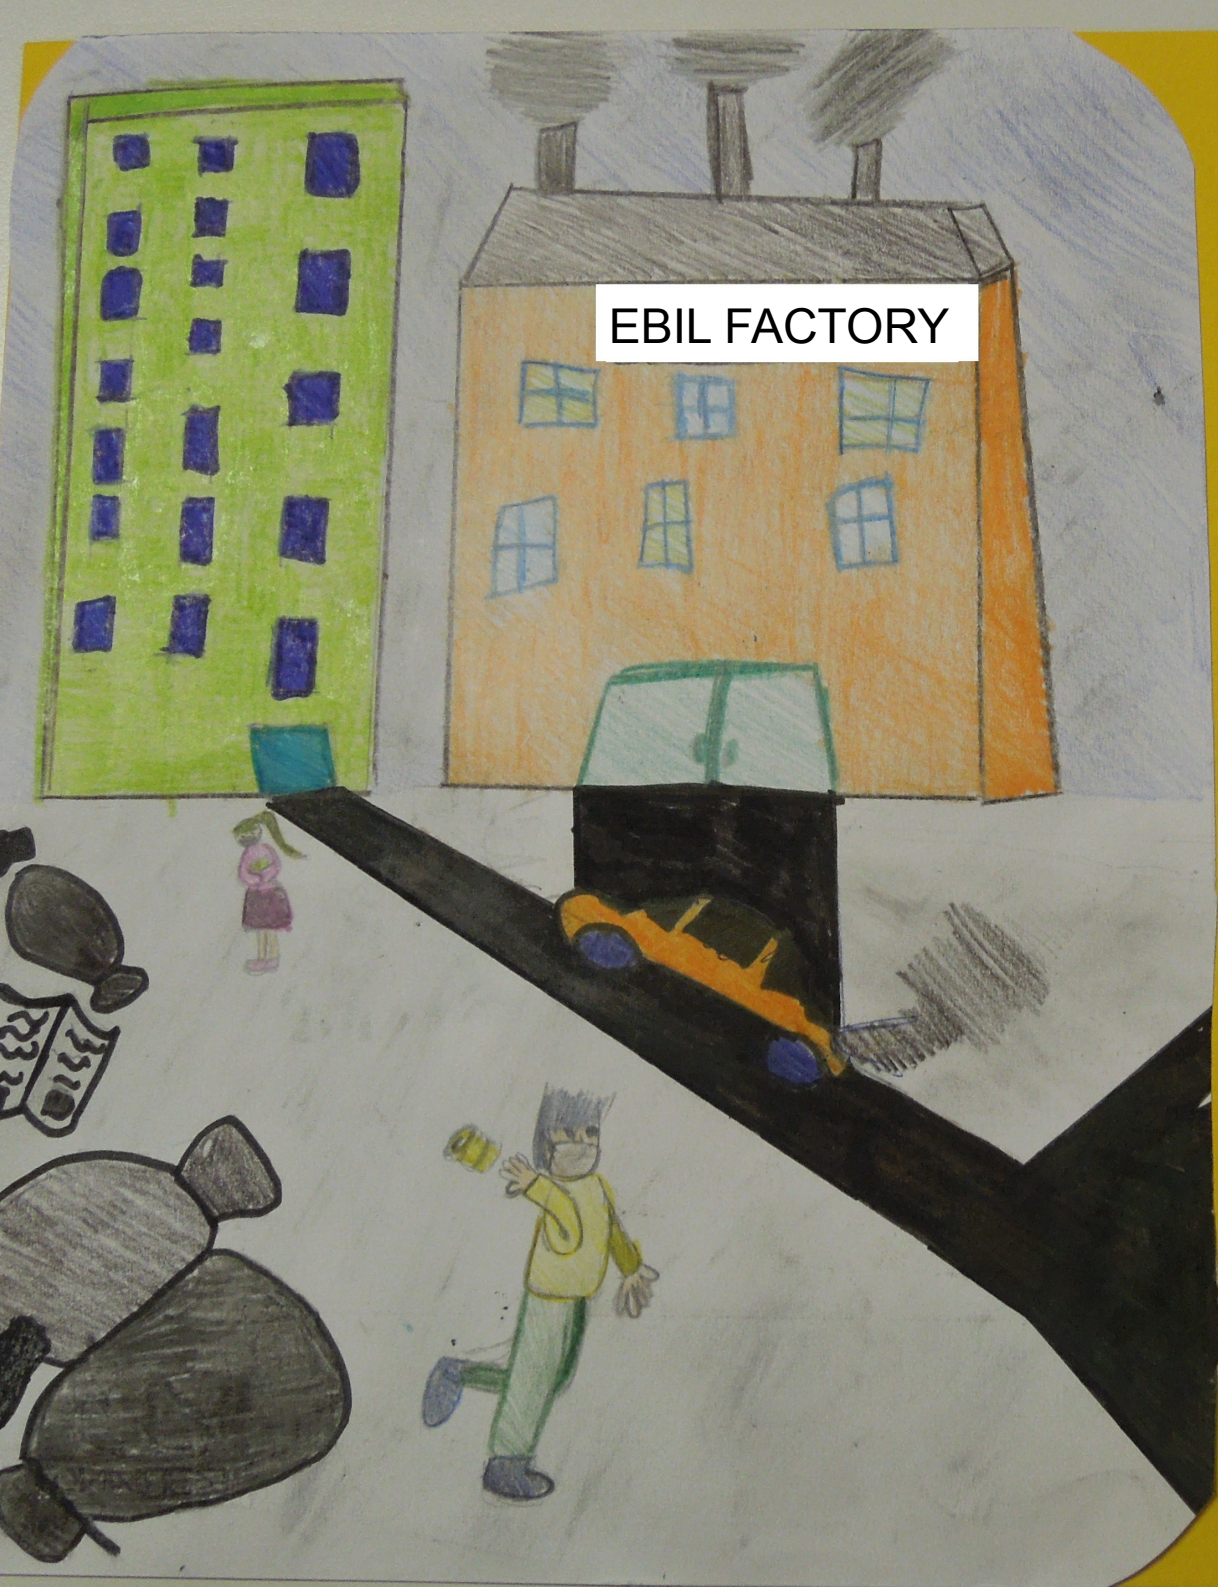

3.

RAIN

EARTH REVOLUTION

EBIL FACTORY

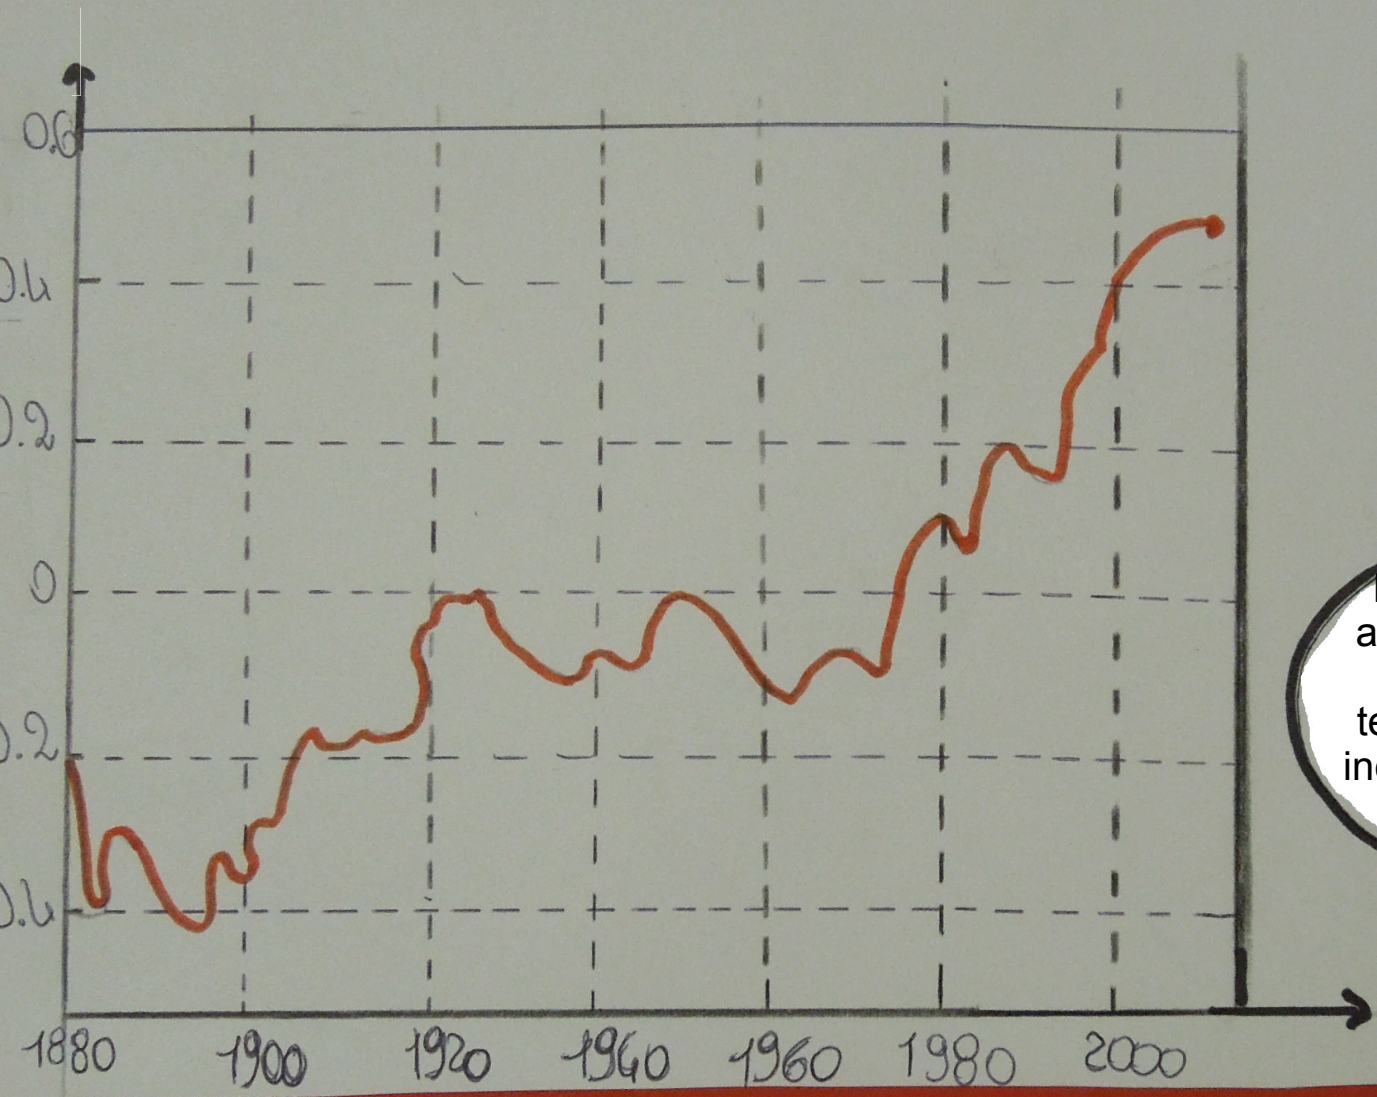

But cars
change the
climate
(not only
cars)

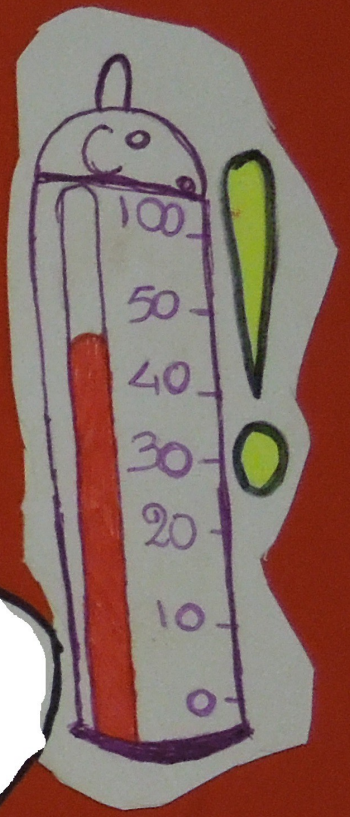

.....by changing the
chemical composition
of the atmosphere:
the atmosphere is our
blanket, it protects us and
keeps us at the right
temperature

Here you have a graph showing that the mean temperature has increased during the year

As temperature
in Italy
increased too much,
some friends of mine
decided
to migrate to
poles

Here it
is too hot!

How hot!

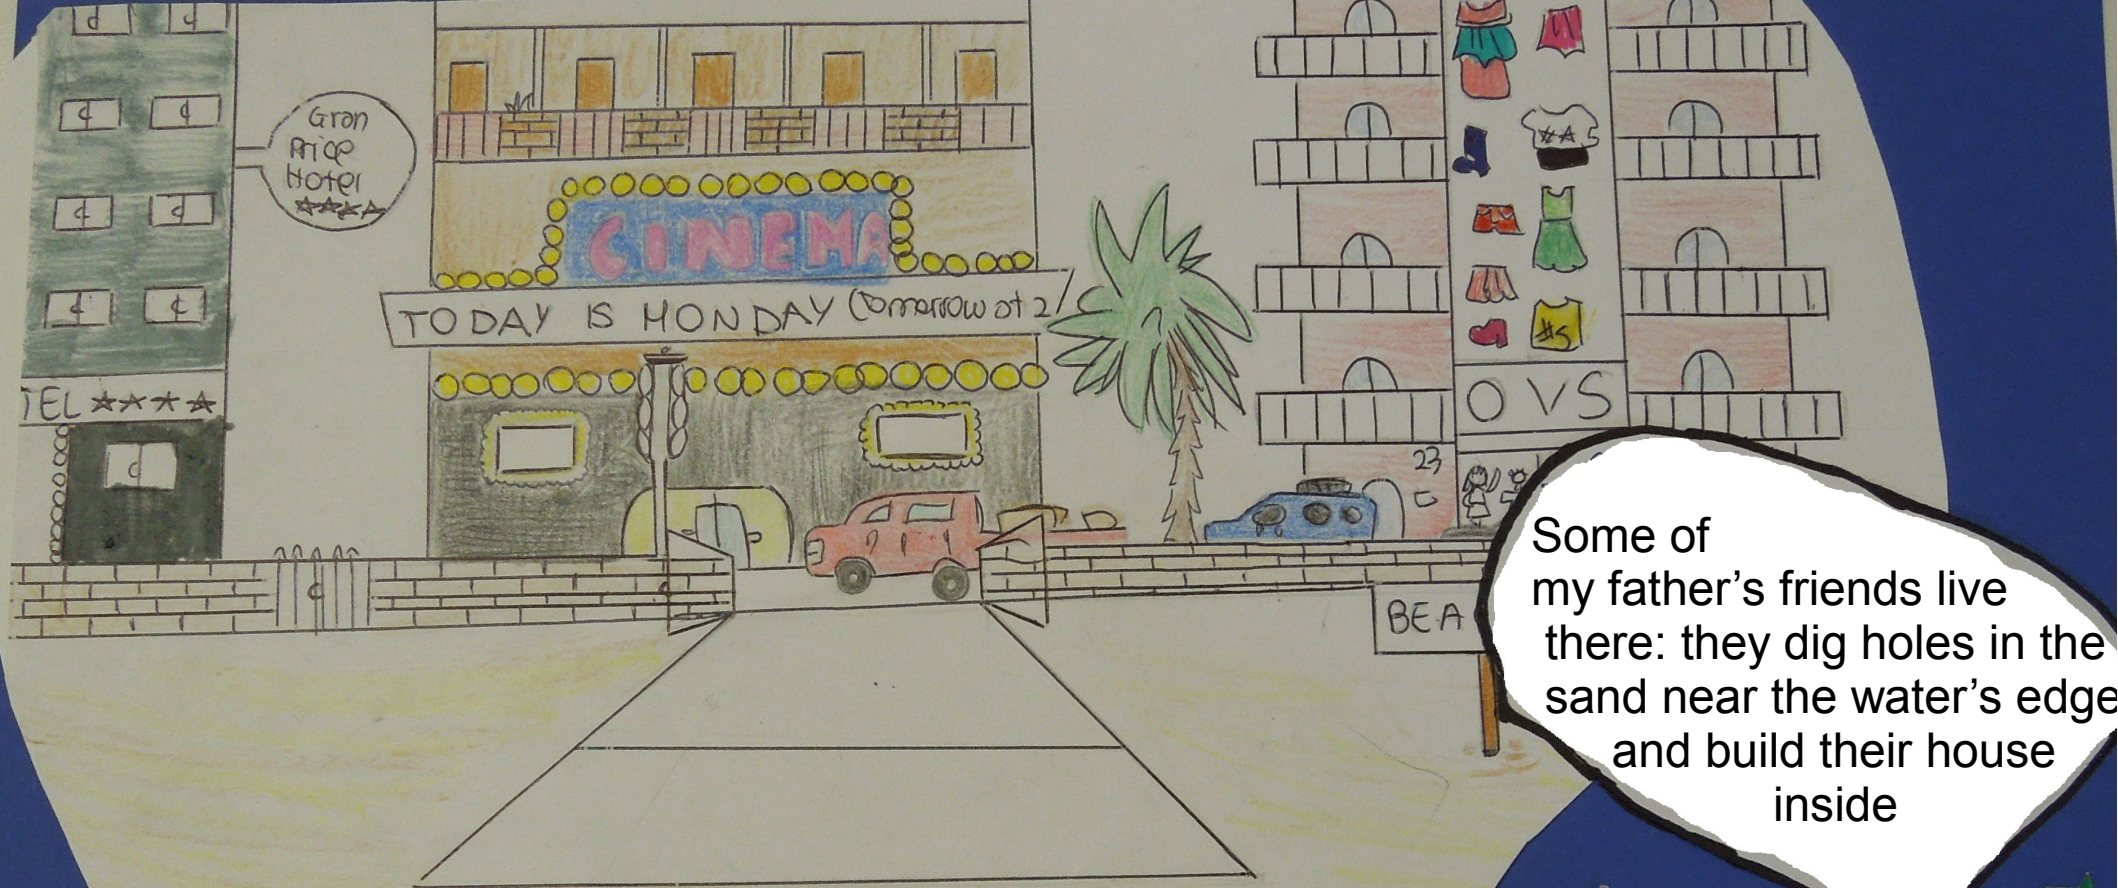

Let's go to
the poles

Plankton's travel

But at the poles
the temperature
increased too and a
poor white-bear
got entrapped on a
iceberg that carried
him to the city

Some of my father's friends live there: they dig holes in the sand near the water's edge and build their house inside

We live in the sand

But, because of climate's changes, in the coastline rained a lot and so their house got flooded

Now I understand
what are the causes
and the consequences
of pollution

The end
